

# Air Quality Community Meeting

ESIP Summer Meeting

8 – 9 July 2009

# Why we are here...

- Resource constrained environment
- Improved IT capabilities
- Broader air quality community
  
- Common Goals!
  - Easy access to data, analytical tools
  - Improved science/policy

# Challenge

- We have to look at several levels of system leveraging and interoperability; define boundaries
- We have to stop building from from scratch; must build/modify from existing systems
- We have to go from competition to collaboration
- We have to work within our resource constraints
- We don't have the answer!... We need your advice/input on how to make this happen... and this is a start!

# Why revisit?

- review ongoing work to build an AQ System of Systems
- sit back and look at the big picture  
*in a workshop setting!*
- deliverables?

# Deliverables?

- Are we getting closer to the “right infrastructure?”

we = OAQPS

we = EPA GEO

we = USGEO / GEO

we = Community / ESIP AQ WG

- perhaps for a subset of these groups we might prepare a summary / report

# Deliverables?

- Specific feedback for organizations – organizationally what can we do better?
  - fundes (EPA, NASA)
  - data managers (OAQPS)
  - USGEO / GEO
  - ESIP AQ WG

# One rule...

Please assume that participants speak for themselves, not their employers.
