

Air Quality and GEOSS GEO VI Plenary Washington DC

November 18, 2009

Doreen Neil
Program Manager (Acting)
Air Quality Applications
Applied Sciences Program
Earth Science Division
NASA

Earth Science Serving Society

Applied Sciences Program

Program Strategy

Goal 1: Enhance Applications Research

Advance the use of NASA Earth science in policy making, resource management and planning, and disaster response.

Goal 2: Increase Collaboration

Establish a flexible program structure to meet diverse partner needs and applications objectives.

Goal 3: Accelerate Applications

Ensure that NASA's flight missions plan for and support applications goals in conjunction with their science goals, starting with mission planning and extending through the mission life cycle.

Applied Sciences Program

Program Strategy: Implementation Menu

- **Earth Science Application Collaboratories**

Create integrated, multidisciplinary approaches to real-world problems

- **Earth Science Applications Teams**

Ensure that all available NASA Earth science resources are utilized for each application area

- **Feasibility Studies**

Investigate ideas for innovative applications

- **Earth Science Decisions Projects**

Incorporate mature applications into end-user decision making processes

- **Mission Applications Support**

Integrate applications needs into mission planning

- **Joint Solicitations with Research Organizations**

Create new knowledge needed for applications

- **Joint Solicitations with End User Organizations**

Accelerate transition of applications to societal benefit

Air Quality Program

Purpose and Themes

Program Purpose

Facilitate the application of NASA Earth science knowledge, satellite products, and modeling capabilities to air quality management and policy functions, particularly functions associated with the implementation of air quality standards, policy, and regulation for environmental, economic, and human welfare.

Programmatic Themes

- Air Quality Planning
- Air Quality Policy & Compliance
- Air Quality Forecasting
- Climate & Air Quality
- Emissions Inventories
- *Programmatic Activities (studies, outreach, etc.)*

Air Quality Program

Present Approach & Path

AIRNow

BlueSky

AIRQuest/RSIG

AIRPACT

NW-AIRQUEST

CMAQ

AQS

NOAA-IDEA

NAAPS

VIEWS/TSS

GIOVANNI

AIRNow-Tech

DataFed

NEI

SERVIR

- Deliberate effort to introduce NASA observations into broad range of AQ decision-support tools. Targeted efforts at CMAQ for depth in that widely used tool.
- Building on this progress, new efforts focus on data fusion/integration, AQ modeling, and analysis tools for routine, sustained use. Plan to work through existing end-user organizations for these systems & tools (e.g., CMAS user group).
- 2010+: More applied research (e.g., use of models with observations to enhance information content). Greater focus on key, enabling techniques and applications-oriented products. Address access to international data sources.

Air Quality Program

Global Sources of Local Pollution

An Assessment of Long-Range Transport of Key Air Pollutants to and from the United States

Committee on the Significance of International Transport of Air Pollutants

Board on Atmospheric Sciences and Climate

Division on Earth and Life Studies

This prepublication version of *Global Sources of Local Pollution: An Assessment of Long-Range Transport of Key Air Pollutants to and from the United States* has been provided to the public to facilitate timely access to the report. Although the substance of the report is final, editorial changes may be made throughout the text and citations will be checked prior to publication. The final report will be available through the National Academies Press by November 2009.

Some Key Air Quality Satellite Sensors

GOES

CLOUDSAT

CALIPSO

MODIS
AIRS

AQUA

PARASOL

OMI

AURA

CALIPSO

Probing Earth's atmosphere to understand the
impacts of climate change

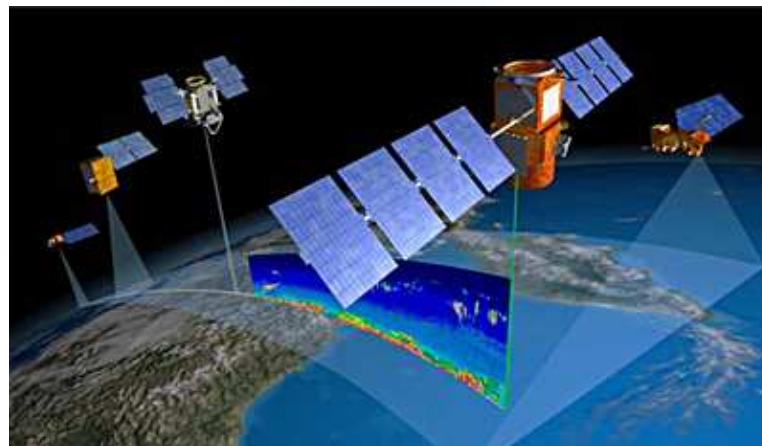

Example: NASA 3D-AQS Project

(Hoff et al., JAWMA, 2009; <http://alg.umbc.edu/3DAQS>)

- *Integrate* satellite sensor and lidar data into EPA's air quality data systems: AIRQuest, RSIG NOAA NESDIS AQS system: IDEA
- Provide greater *accessibility* and *usability* of satellite and lidar data to users of these systems through IDEA and US Air Quality Smog Blog
- Enable monitoring in *horizontal* and *vertical* dimensions for forecasting and retrospective analysis

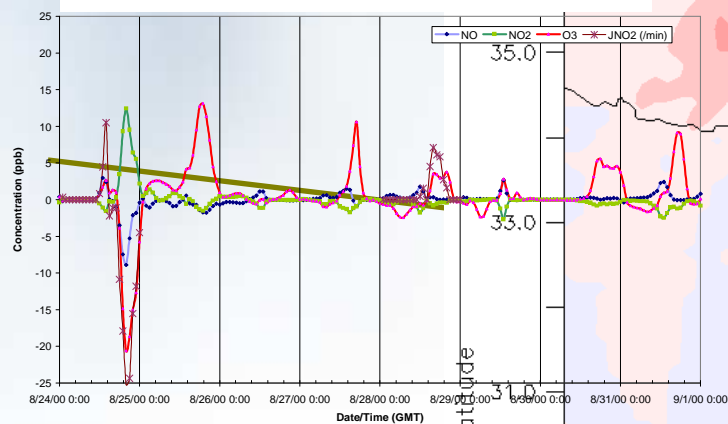

Example: Use of Satellite Data to Improve the Physical Atmosphere in SIP Air Quality Decision Models

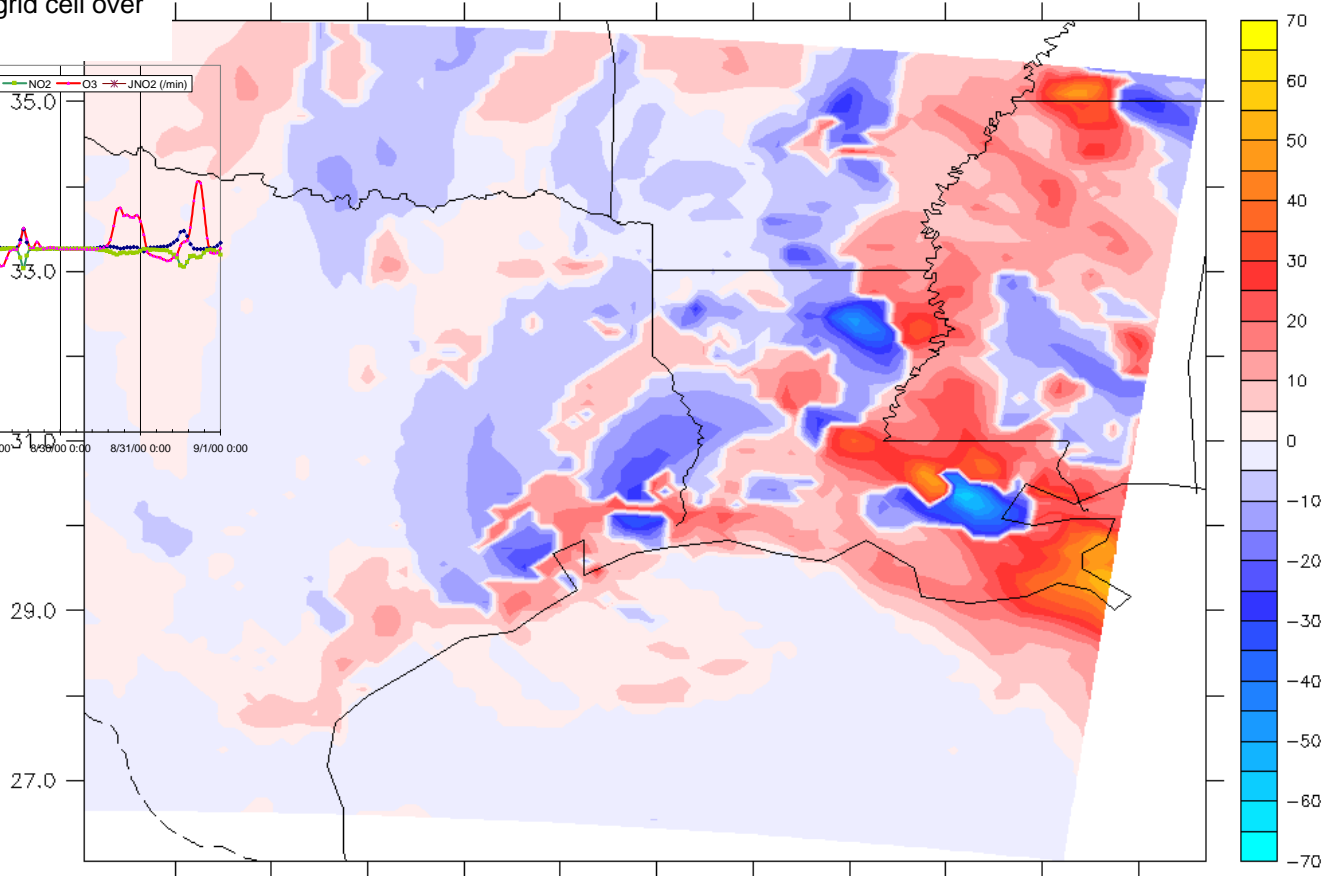

Richard McNider, Arastoo Pour Biazar, Kevin Doty, Don Moss, Scott Mackaro, Stephanie Haines, **University of Alabama in Huntsville**; Gary Jedlovec, **NASA Marshall Space Flight Center**; William Lapenta, **NOAA/EMC**; Jon Pleim, Shawn Roselle, **EPA ,NERL/AMAD**; Bright Dornblaser, **Texas Commission on Environmental Quality (TCEQ)**, Bob Cameron, **Minerals Management Service (MMS)**

Largest changes in O₃ concentration due to use of observed clouds for the period of August 24, 2000, to September 1, 2000.
(O_{3_b}-O_{3_a}, b=Sat. Observed Cloud, a=Control)

The differences between NO, NO₂, O₃ (ppb) and JNO₂ from satellite cloud assimilation and control simulations for a selected grid cell over Houston-Galveston area.

**IMPACT OF
PHOTOLYSIS
ADJUSTMENT**

Corrections of up to 70 ppb for Ozone

Earth Science Training Modules

** International & US training creates demand for NASA data **

Training Modules & Training Sessions

- NASA Applied Sciences' Air Quality Program developed training materials to introduce managers and policy makers to NASA satellite observations
 - Set of re-usable instructional modules
 - Set of case studies for computer-based, hands-on learning
- Often conducted in connection with international Earth Science Field Studies and involvement in international committees
 - 7SEAS Earth Science Study in SE Asia
 - Group on Earth Observations (GEO)
 - UN Office of Outer Space Affairs' Graz Symposium for Satellite Applications (hands-on training for 80+ professionals from developing countries in 2007 & 2008)

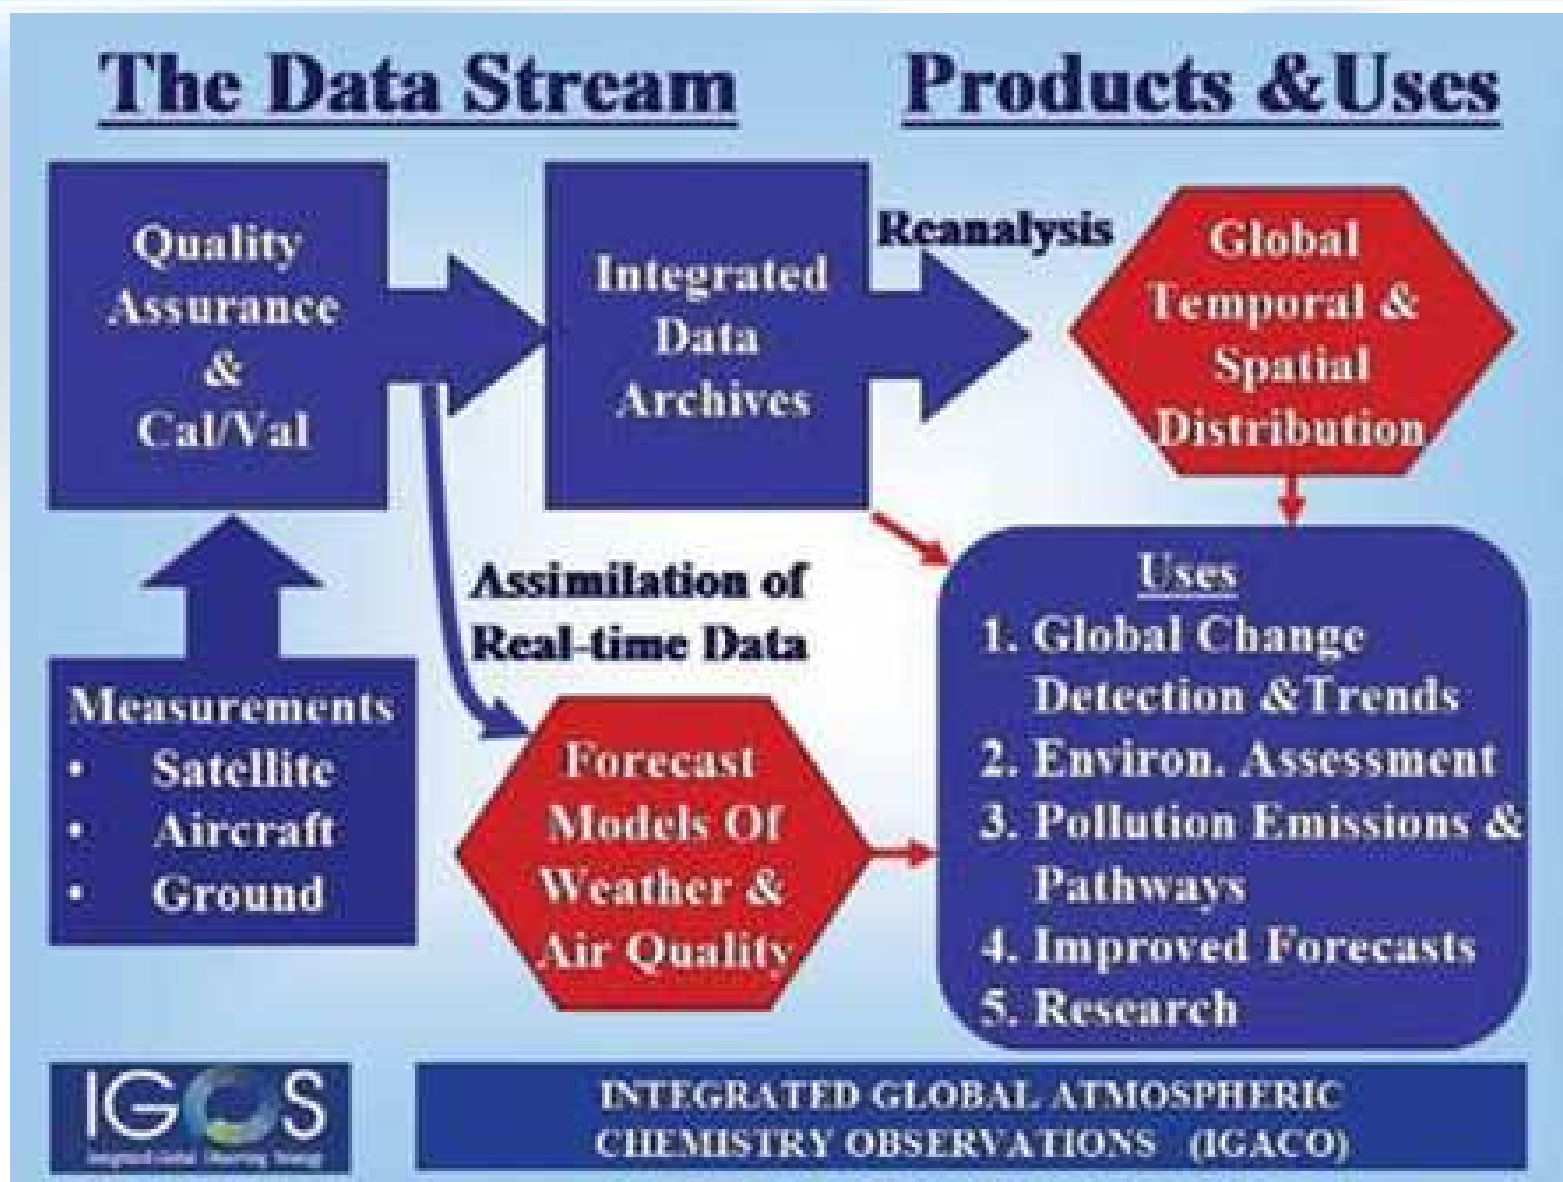

Training in China ↑

Training in Singapore ↓
(done in concert with planning for
2011 Earth science study in SE Asia)

IGACO provides a framework for Communities of Practice

Air Quality: Research & Applications

A Vision

AQ Community Using All Appropriate Observations

- Smooth transition between current and future sensors (eg, MODIS & VIIRS)
- Private sector forecasters to gain confidence & build demand for observations/models
- AQ contractors of federal agencies, states are routine users of Earth observations/models
- Advocates for ACE, GEO-CAPE (and other international atmospheric satellites)

Analysis & Visualization Tools Pull Data Seamlessly

- Intelligent, interoperable systems can support advanced analysis
- Analysts/managers have & use right data products available at right time for right place

Strong Public Familiarity, Demand, Expectations for AQ information

- Earth Science supports stakeholder/media outreach to public

Air Quality a successful example Nationally and Internationally

- Successful example for US GEO, CEOS, International GEO
- Cooperation with ESA and increased international data sharing

AQ Research & Applications communities iterate on key research (observations, science, modeling, etc.) and transitions to decision making

Thank You
