

# The OMI NO<sub>2</sub> Standard Product

Edward A. Celarier

James F. Gleason

Eric J. Bucsela

*NASA Goddard Space Flight Center*

*Greenbelt, MD*

# Overview

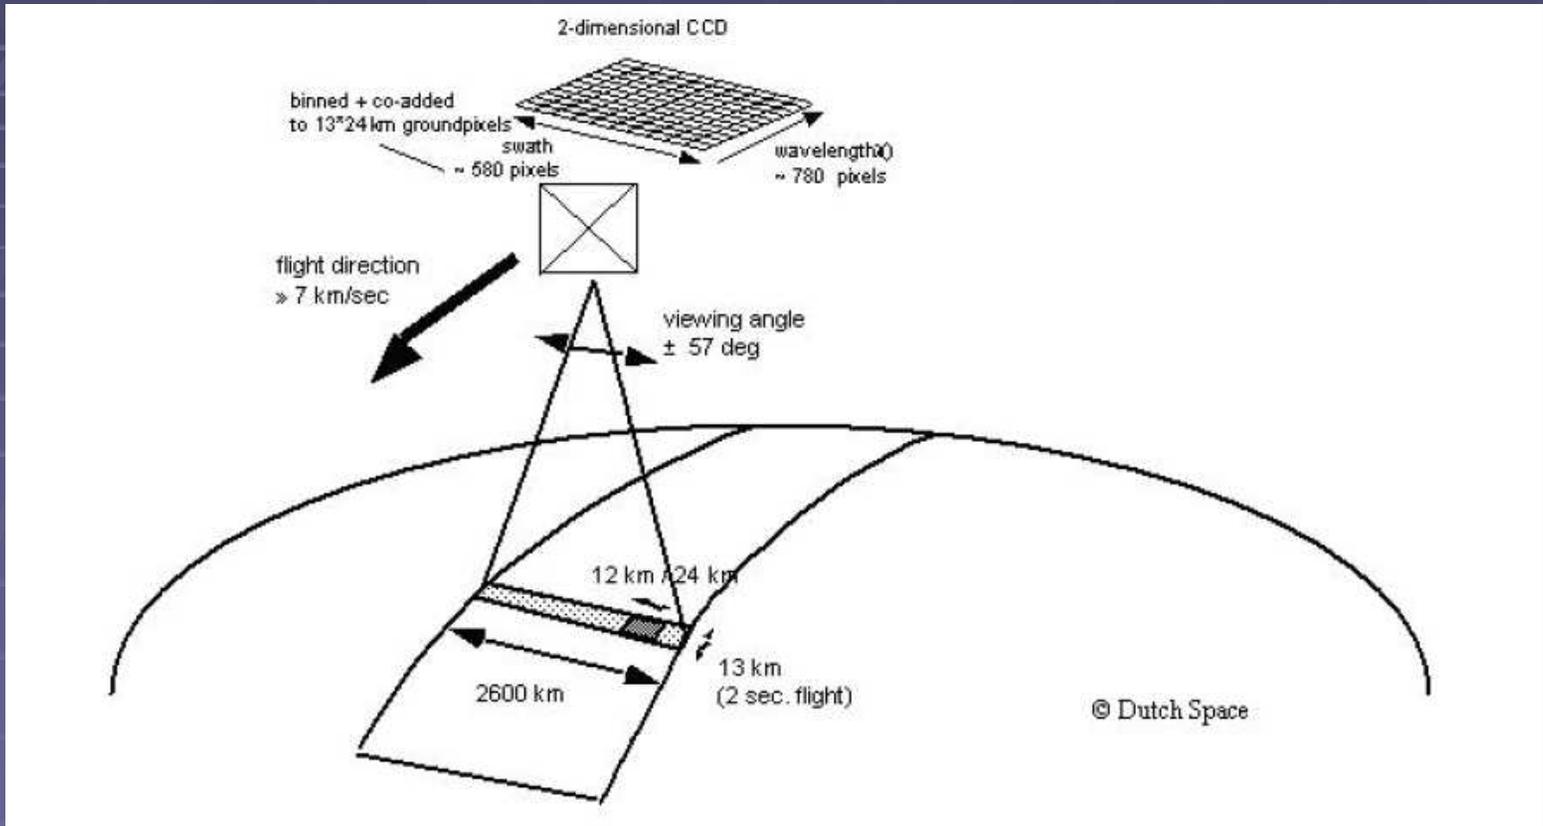

- OMI instrument
- OMI NO<sub>2</sub> Standard Product
- Quality of NO<sub>2</sub> data
- Cautions about data comparisons
- Challenges and work in progress

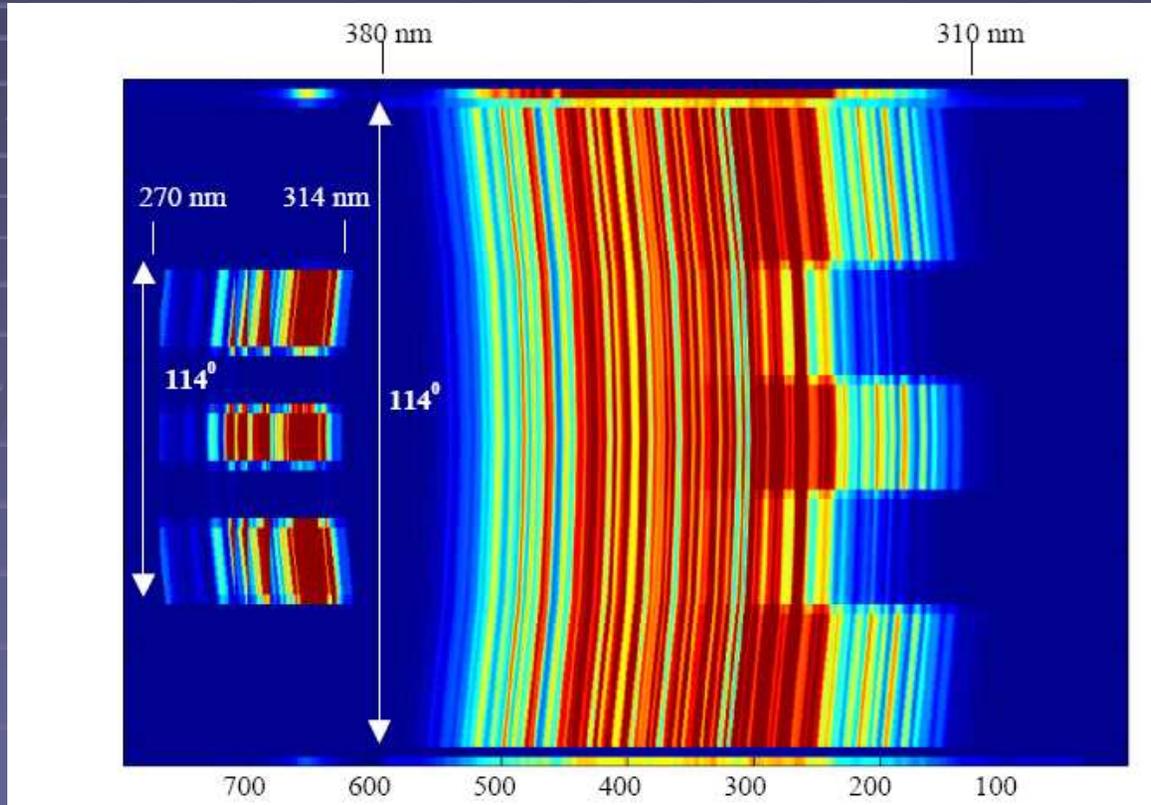

# OMI

- **Ozone Monitoring Instrument**
- Joint Netherlands, Finland, US project
- **EOS Aura Satellite**
- **A-Train**
- Launch: 15 July 2004
- Nominal ops: 06 Sept 2004
- Polar, sun-synchronous orbit
- Overpass time at equator (AN): 13h45
- Swath width sufficient to give global coverage (swaths touch at equator)

# OMI Instrument (cont'd)

- 2D CCD detector
  - Simultaneous cross-track spatial and spectral coverage
  - Coverage in 3 spectral ranges
    - UV1 (270-314 nm); UV2 (306-380 nm); VIS (350-500 nm)
  - Retrievals
    - Ozone
    - NO<sub>2</sub>
    - SO<sub>2</sub>
    - ClO, OCIO, HCHO, BrO, OHCCHO (glyoxal)
    - Cloud heights and cloud fraction
    - Aerosol OD and SSA.

← Wavelength →

← Cross-track pos. →

# OMI NO<sub>2</sub> Standard Product Algorithm

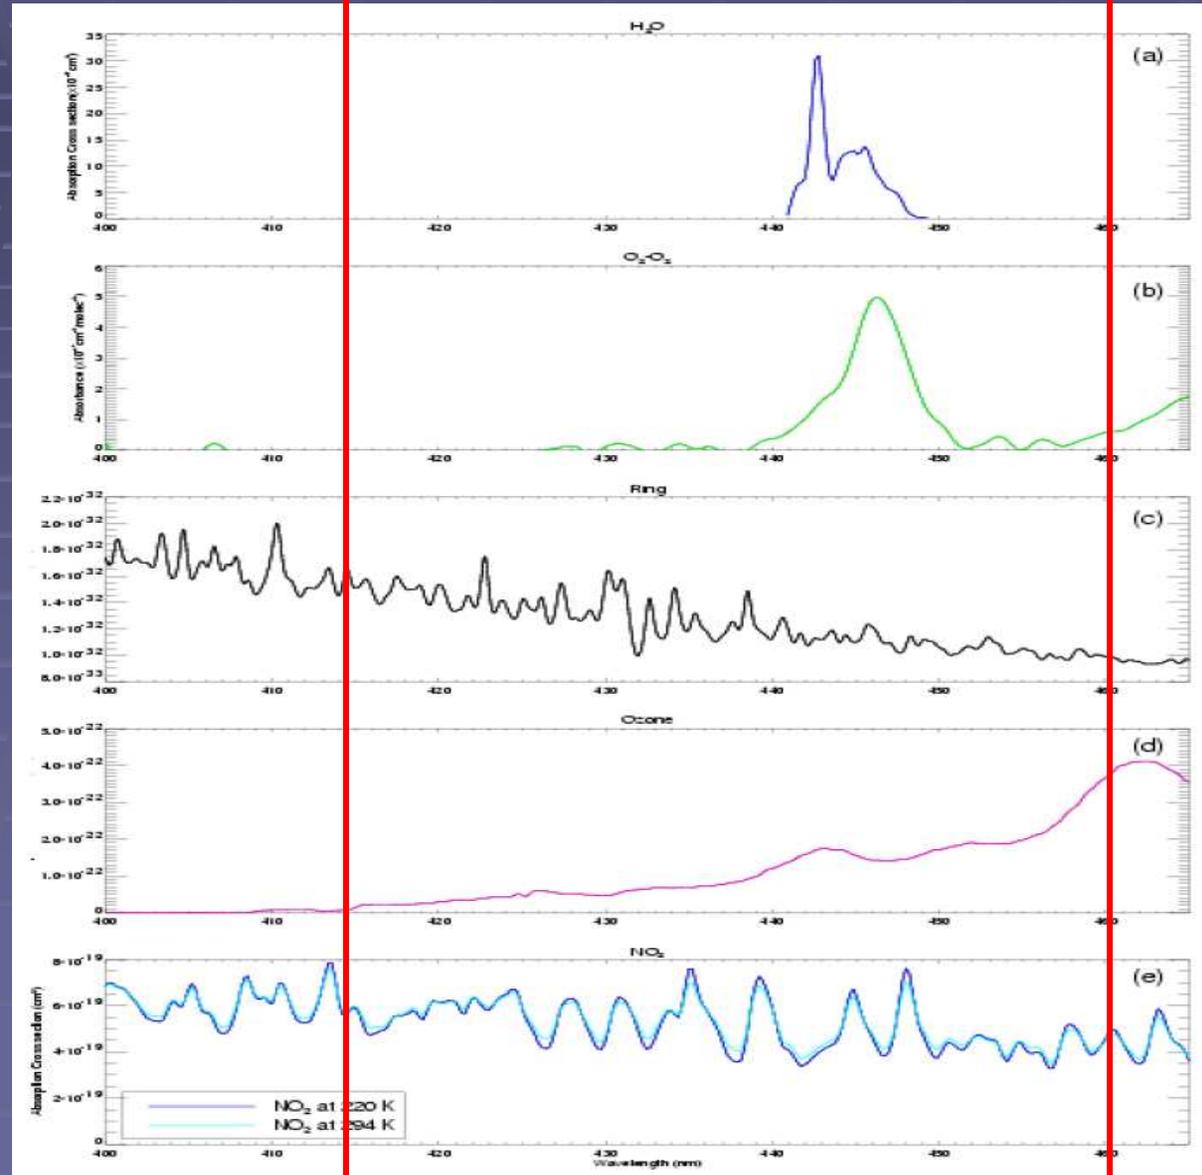

Proceeds in 3 steps

1. Fit laboratory spectra to spectral albedo to obtain slant column density.
2. Compute air mass factors (AMF) to apply, according to the geophysical situation
3. Stratosphere/Troposphere separation and correction of polluted FoVs.

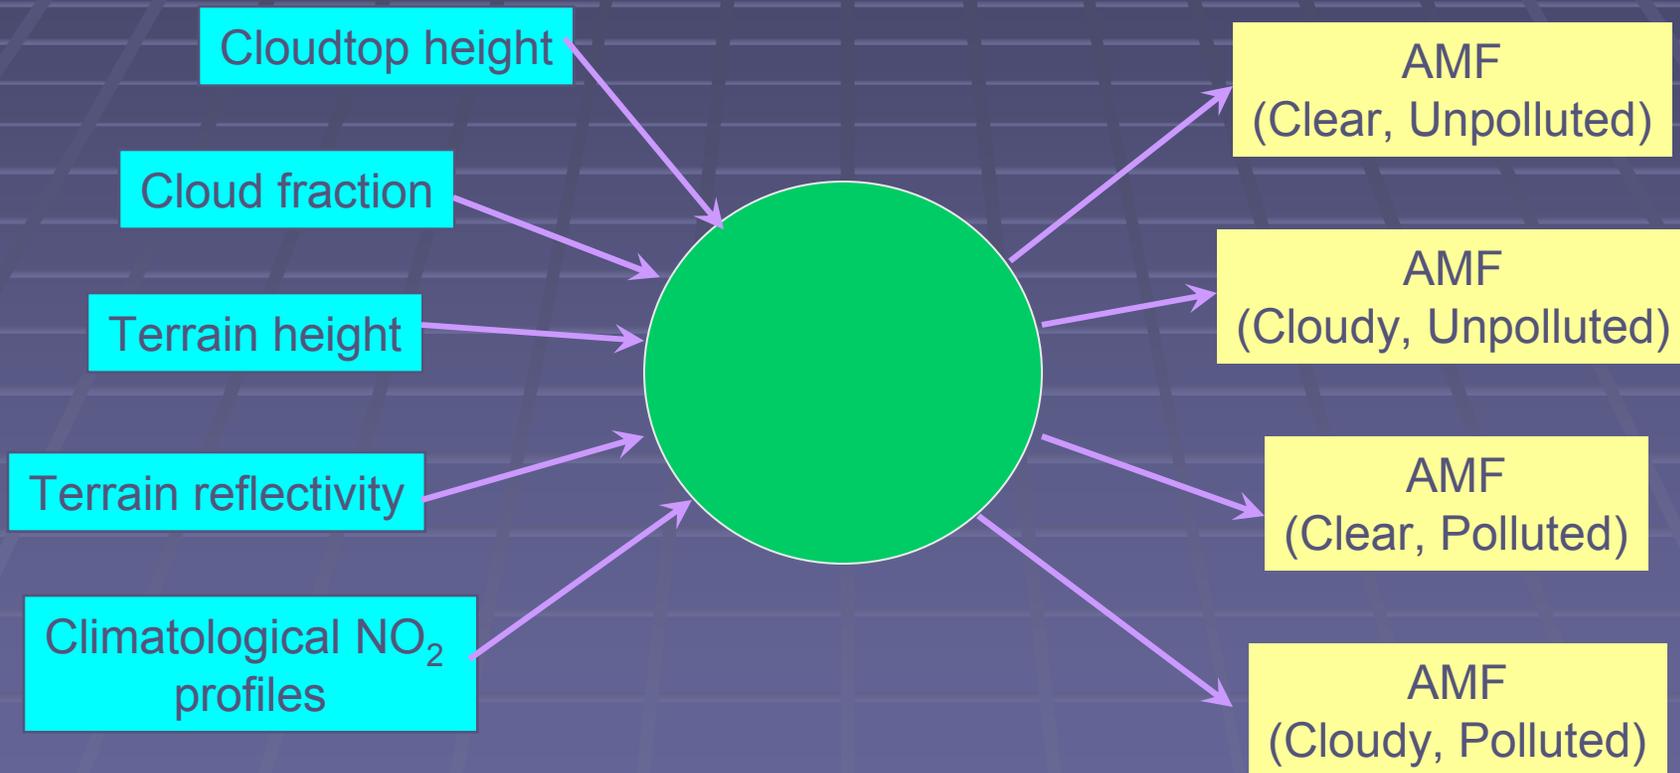

# Absorption cross sections for common atmospheric species (400-465 nm)

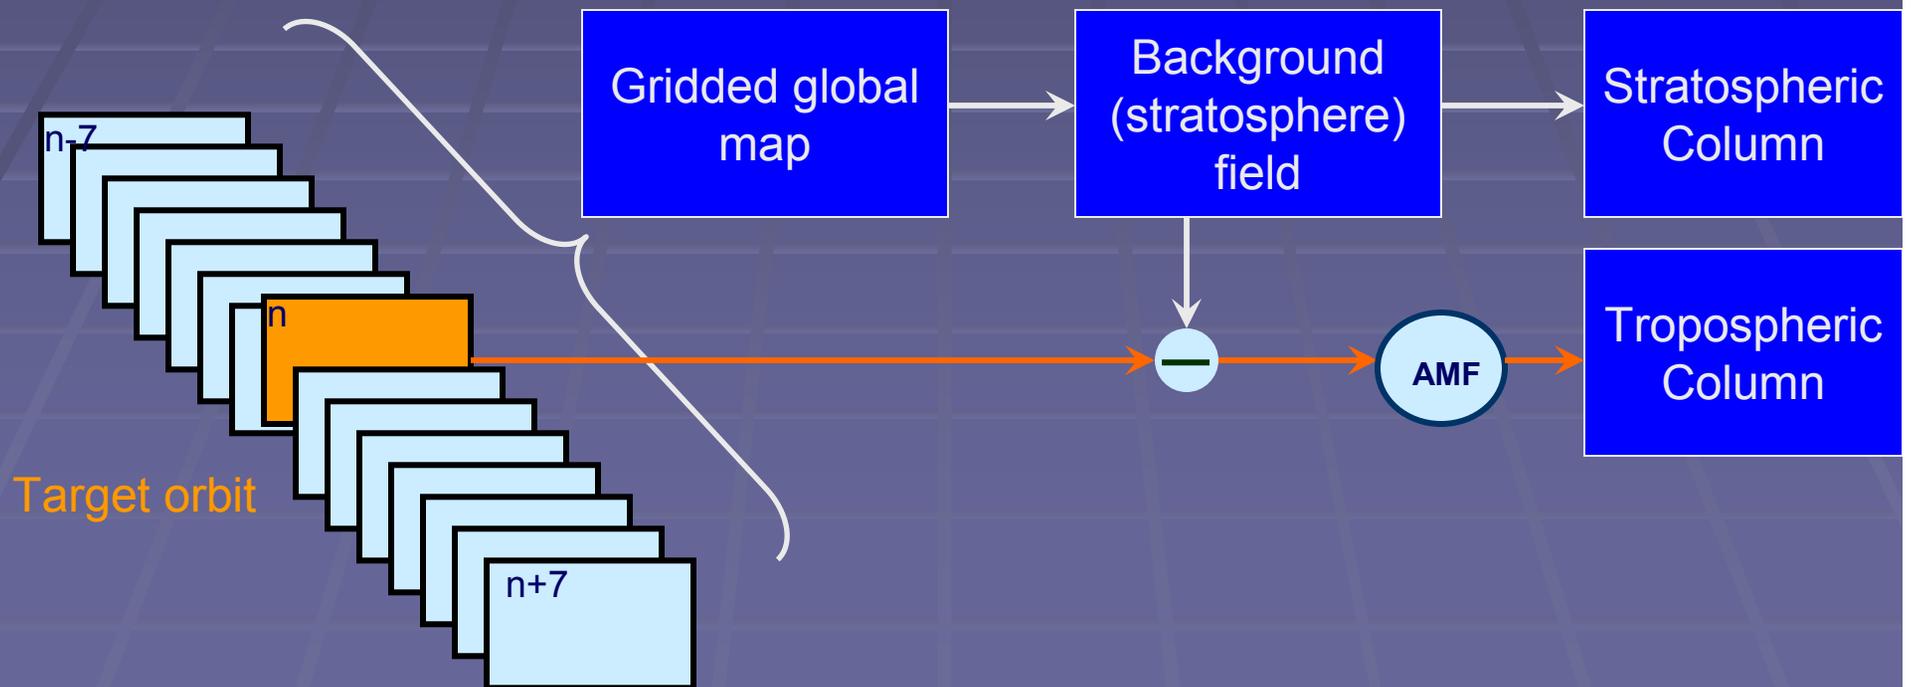

Ring Effect

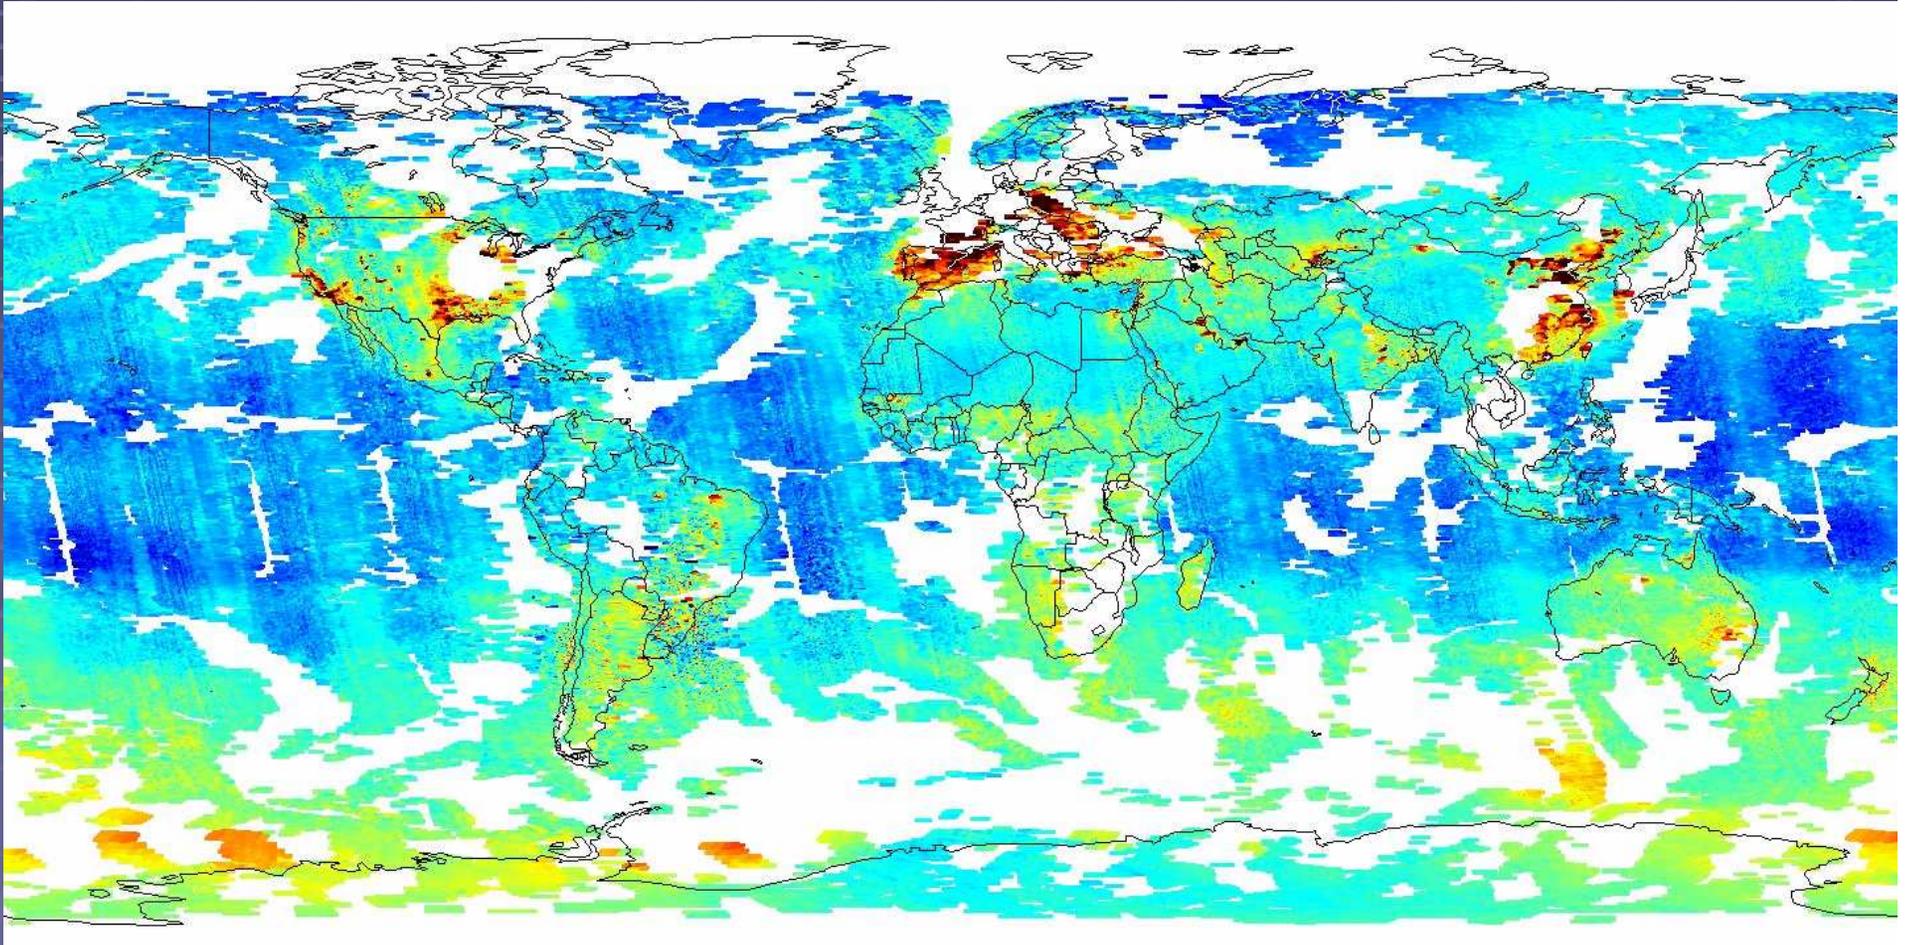

# Computation of Air Mass Factors (AMFs)

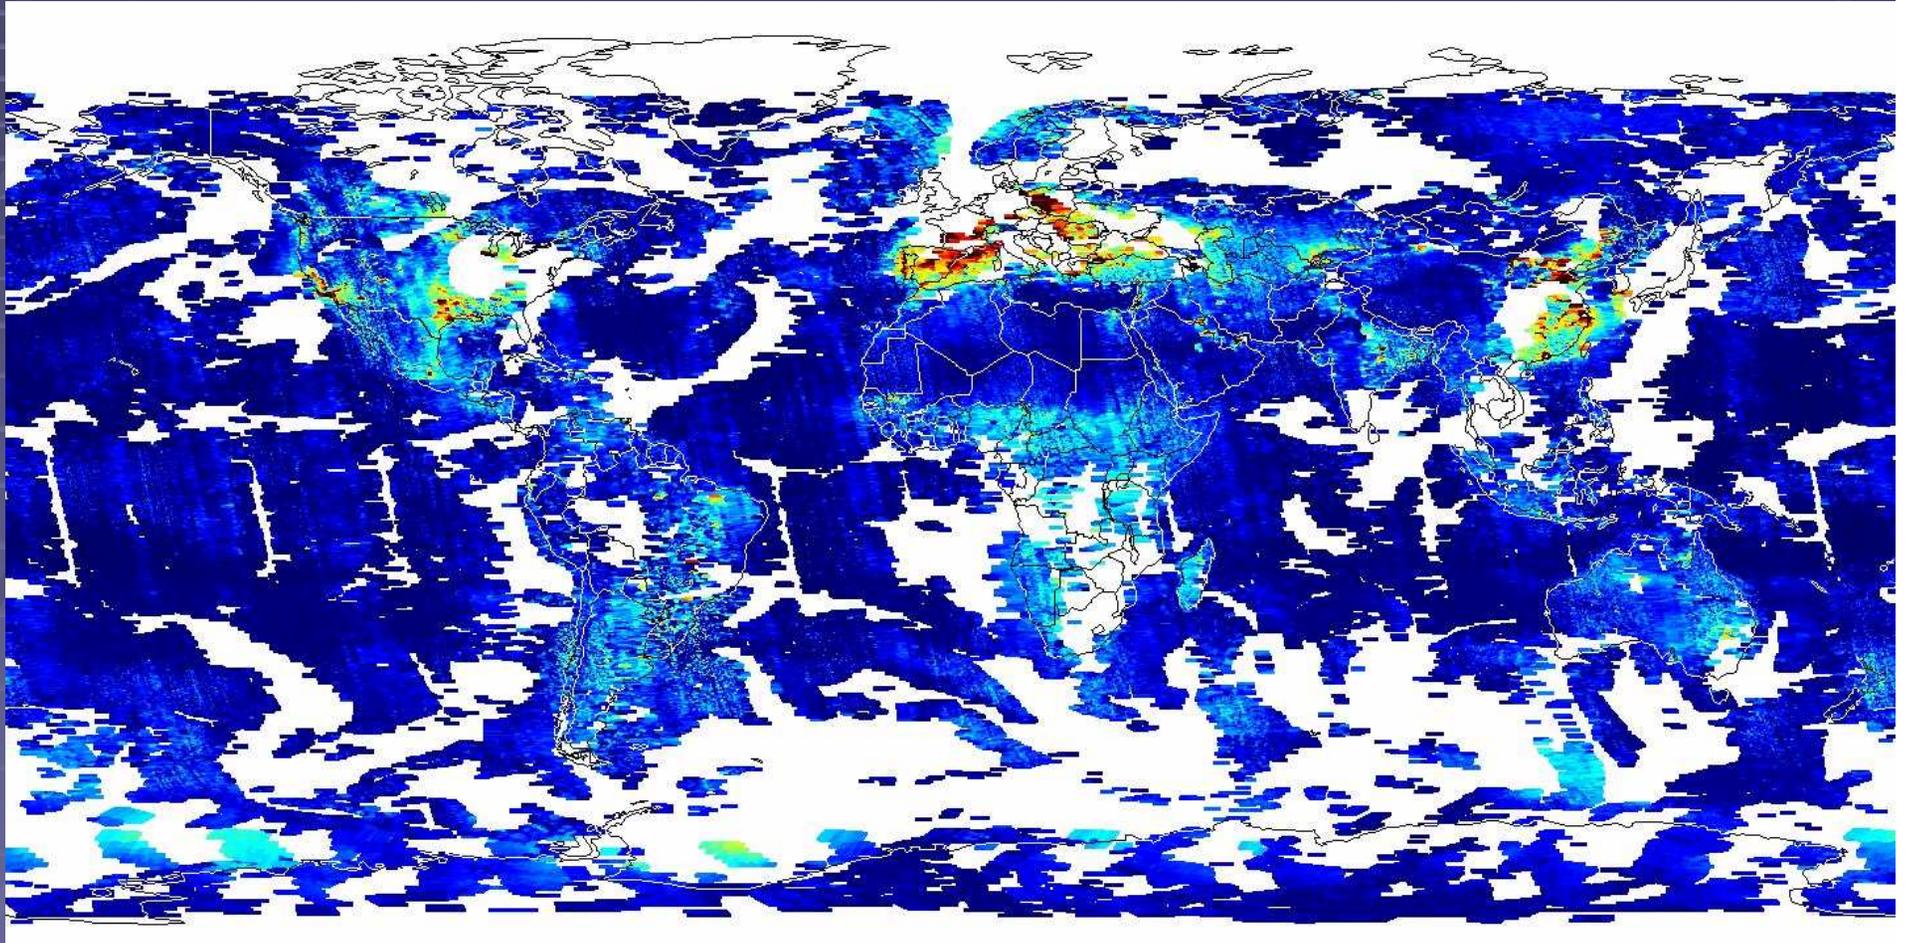

# Stratosphere-Troposphere Separation

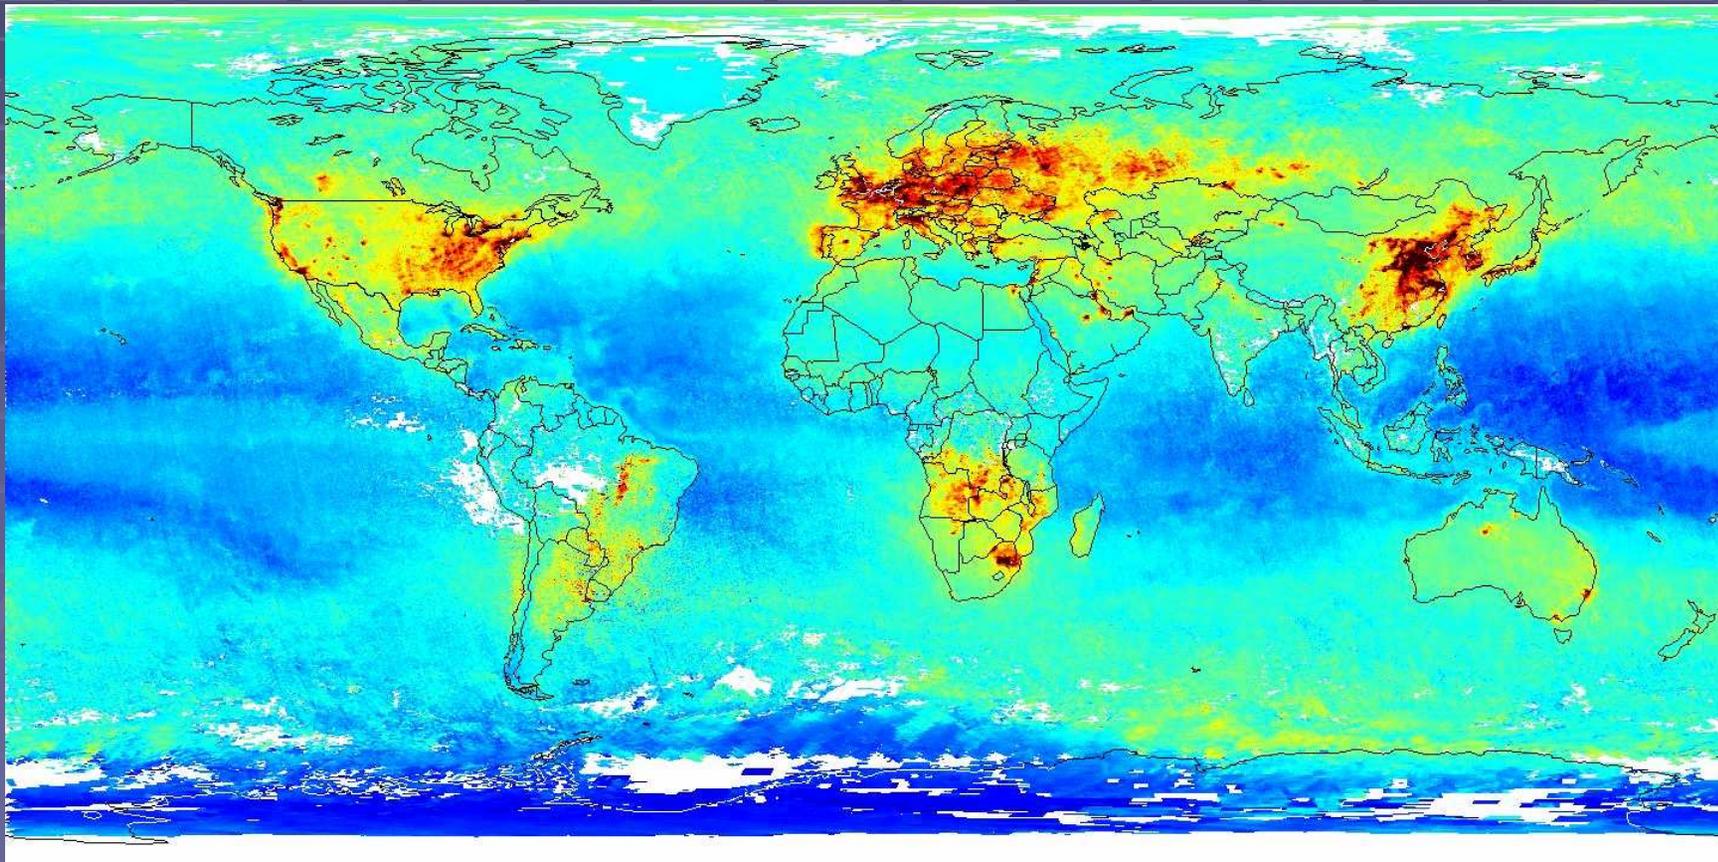

# OMI Total NO<sub>2</sub> column 2007.10.26

# OMI Tropospheric NO<sub>2</sub> column 2007.10.26

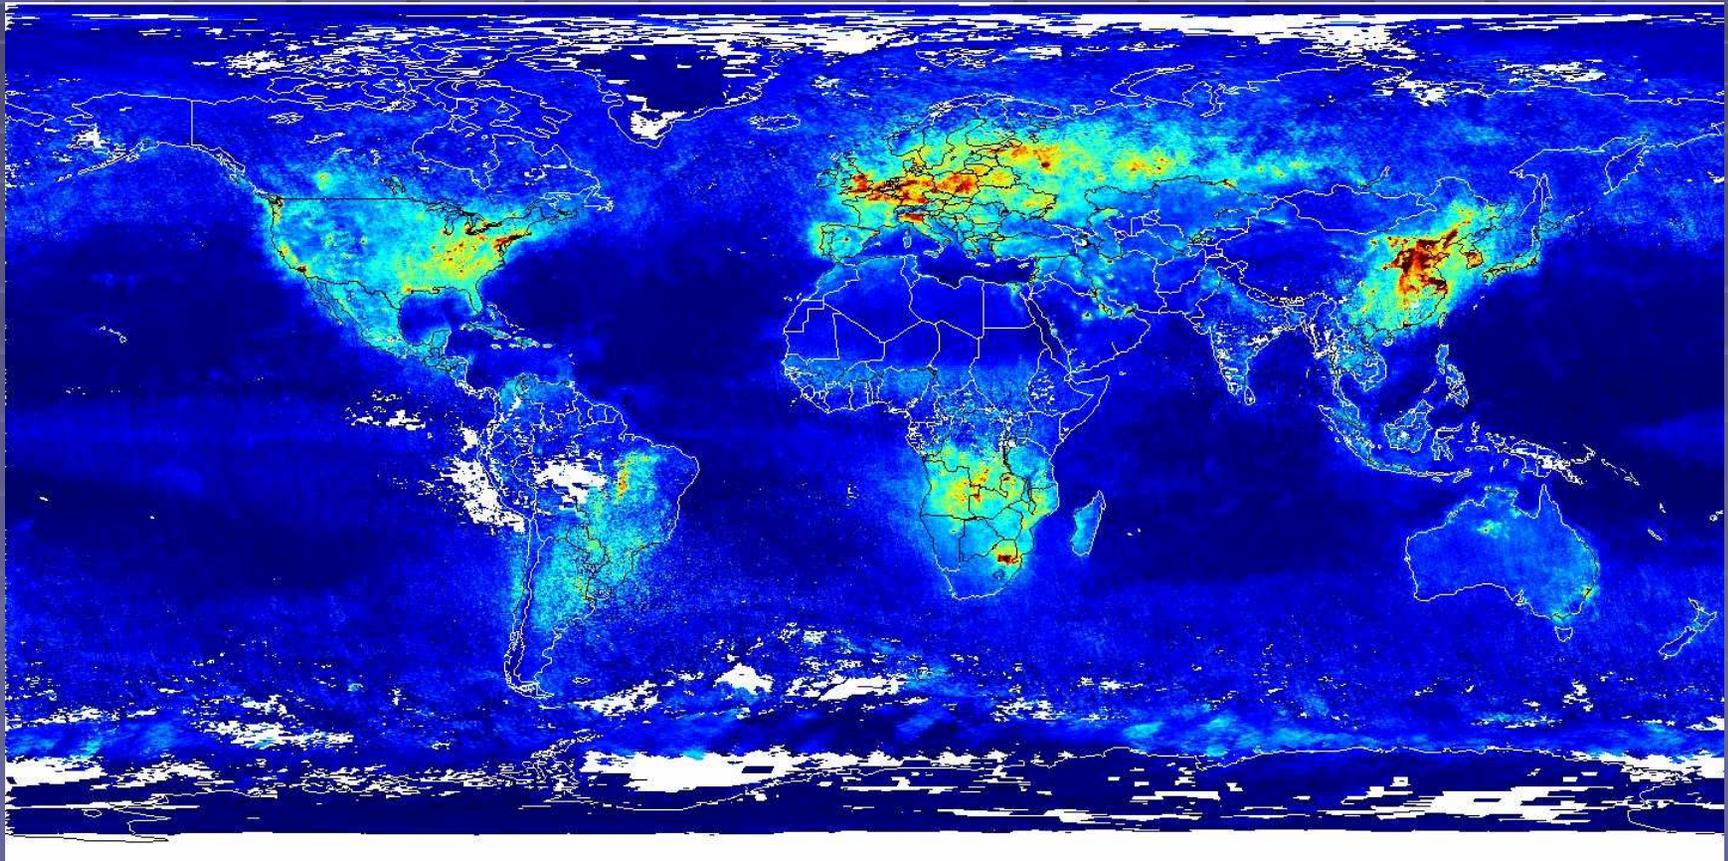

# September 2007 Average Total NO<sub>2</sub>

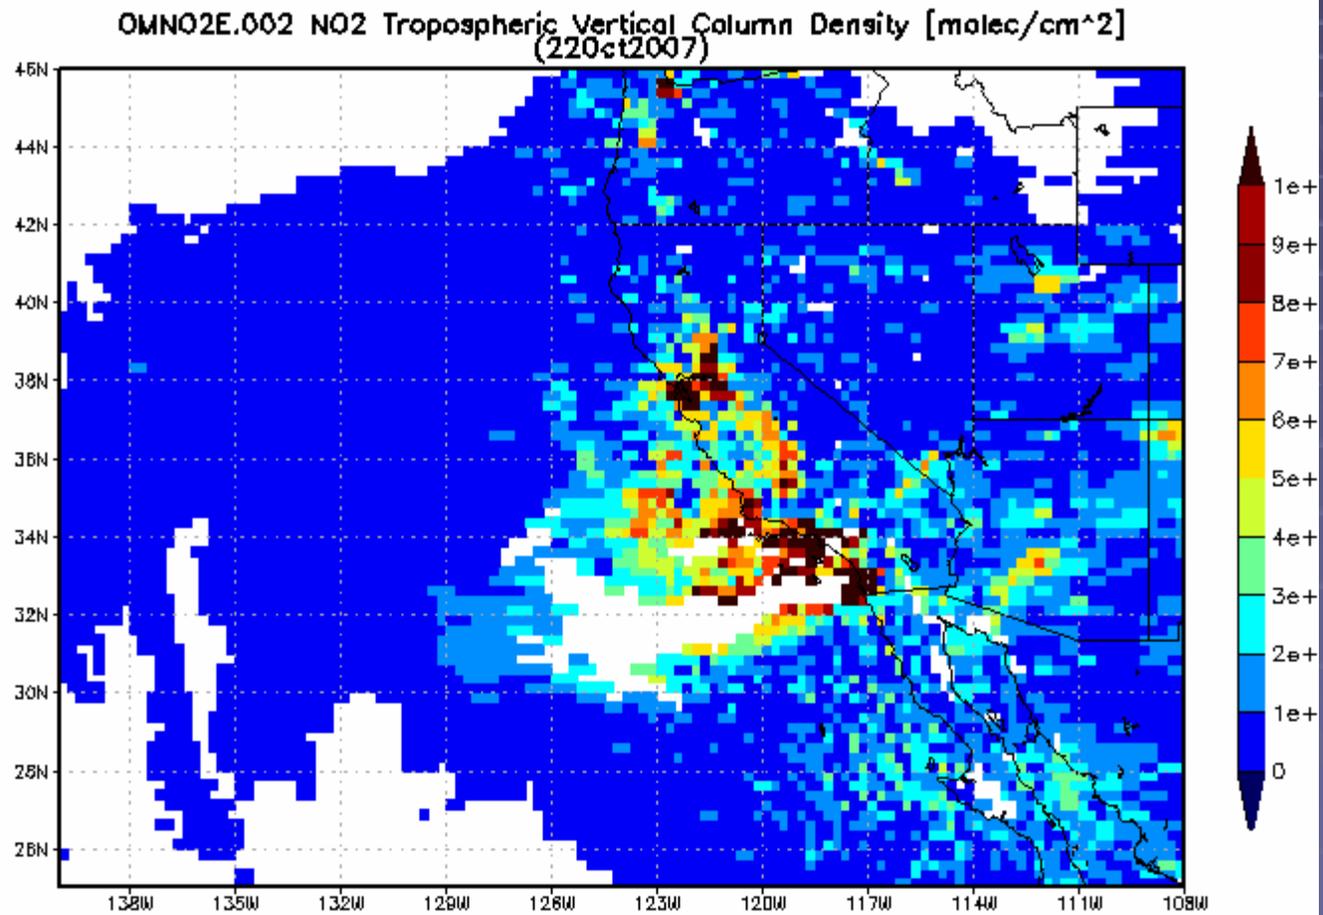

$\times 10^{15} \text{ cm}^{-2}$

# September 2007 Average Tropospheric NO<sub>2</sub>

$\times 10^{15} \text{ cm}^{-2}$

# California Wildfires 2007.10.22

Graphic produced by Giovanni, GES-DISC

# OMI NO<sub>2</sub> Data Availability

## Level-2

- One file per orbit
- HDF-EOS v.5 Swath file format
- Available from GES-DISC

## Level-2G (gridded)

- One file per day
- Same data as in corresponding L2 files, but organized geographically.
- HDF-EOS v.5 Grid file format
- Available from GES-DISC, Giovanni

# OMI NO<sub>2</sub> Standard Product Data Availability (cont'd)

## Level 3

- Tropospheric and total NO<sub>2</sub> used to produce daily maps on 0.25° x 0.25° grid.
- Data averaged, and weighted by clouds, etc.
- Available as ASCII, and in Google Maps format (kml).
- Available from AVDC

## Station Overpass

- Produced for selected locations.
- Plain ASCII files.
- New locations can be requested
- Available from AVDC

# Quality of NO<sub>2</sub> data

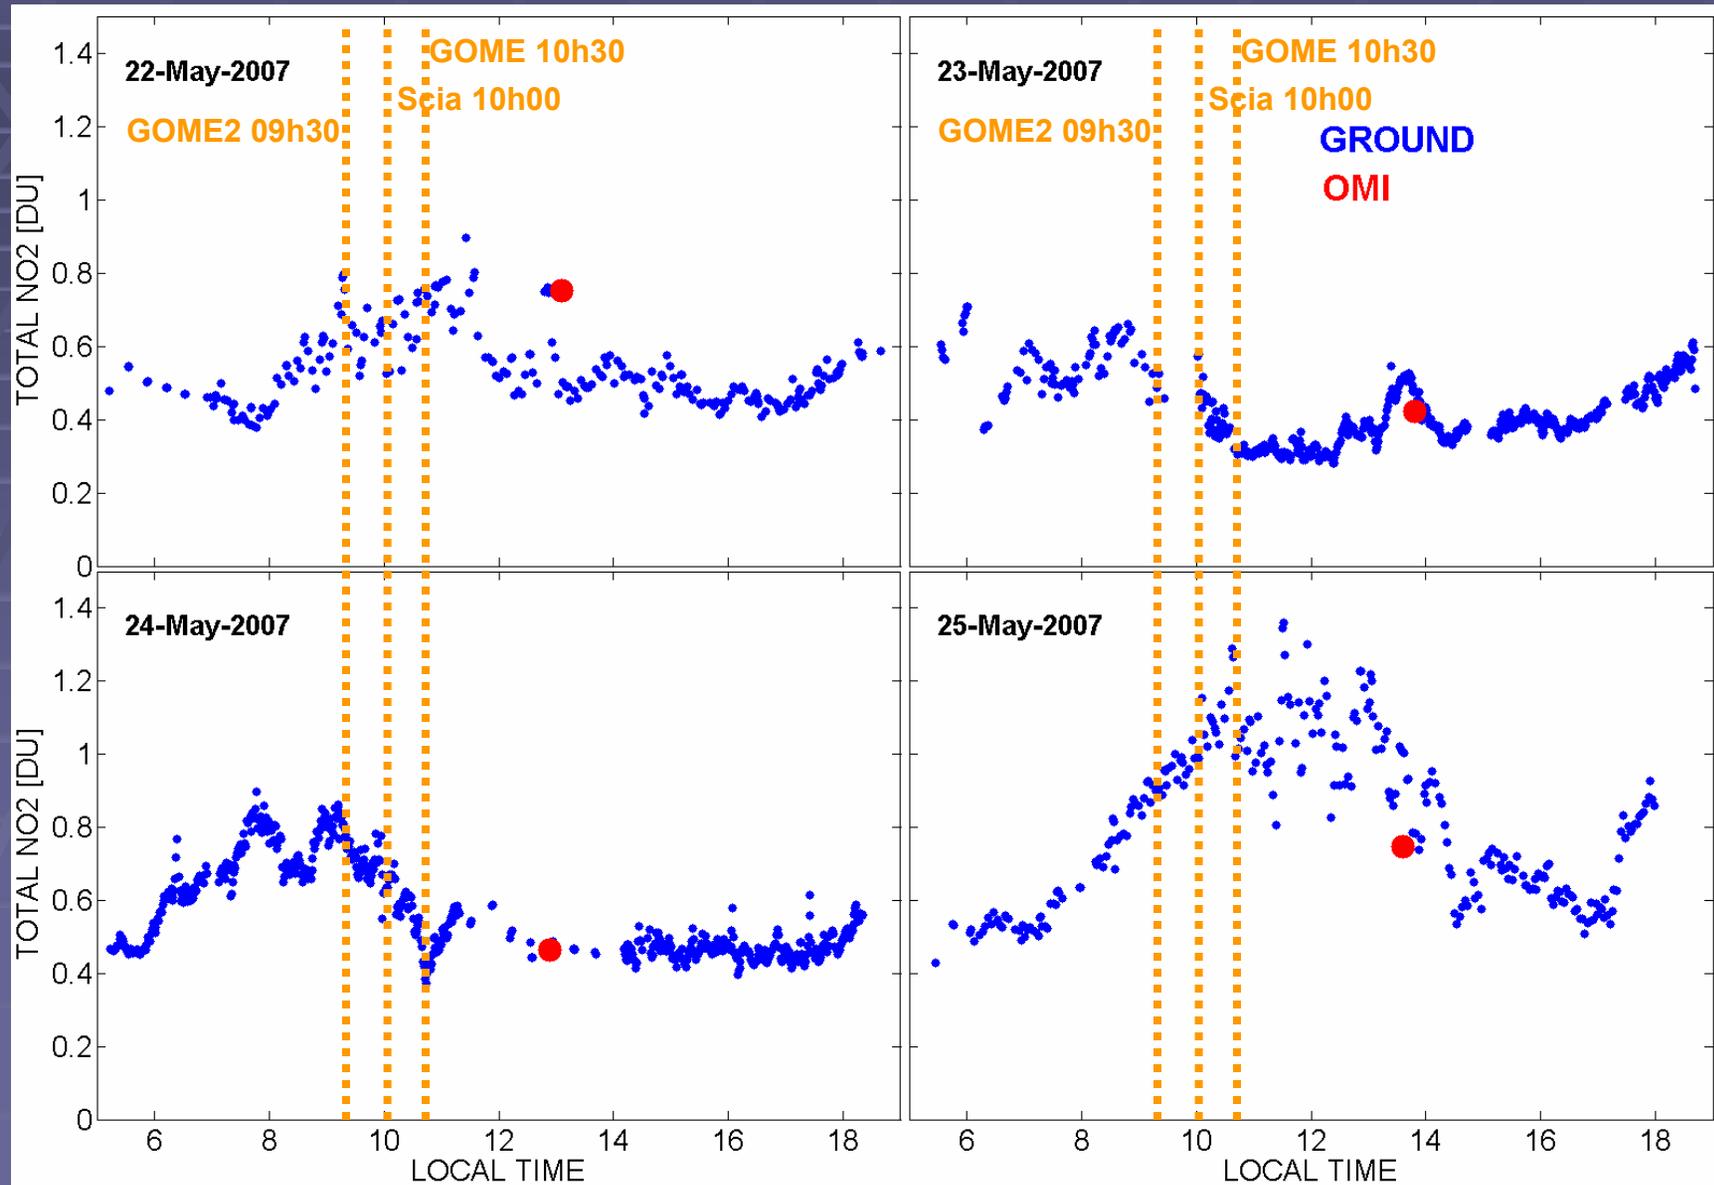

## NO<sub>2</sub> columns

- Total
- Stratosphere
- Troposphere
- These have been validated in clear-sky conditions against ground based measurements
- OMI (v 1.0) estimates for all three columns tend to be about 15–30% lower than corresponding ground-based estimates.

# Cautions about data comparisons

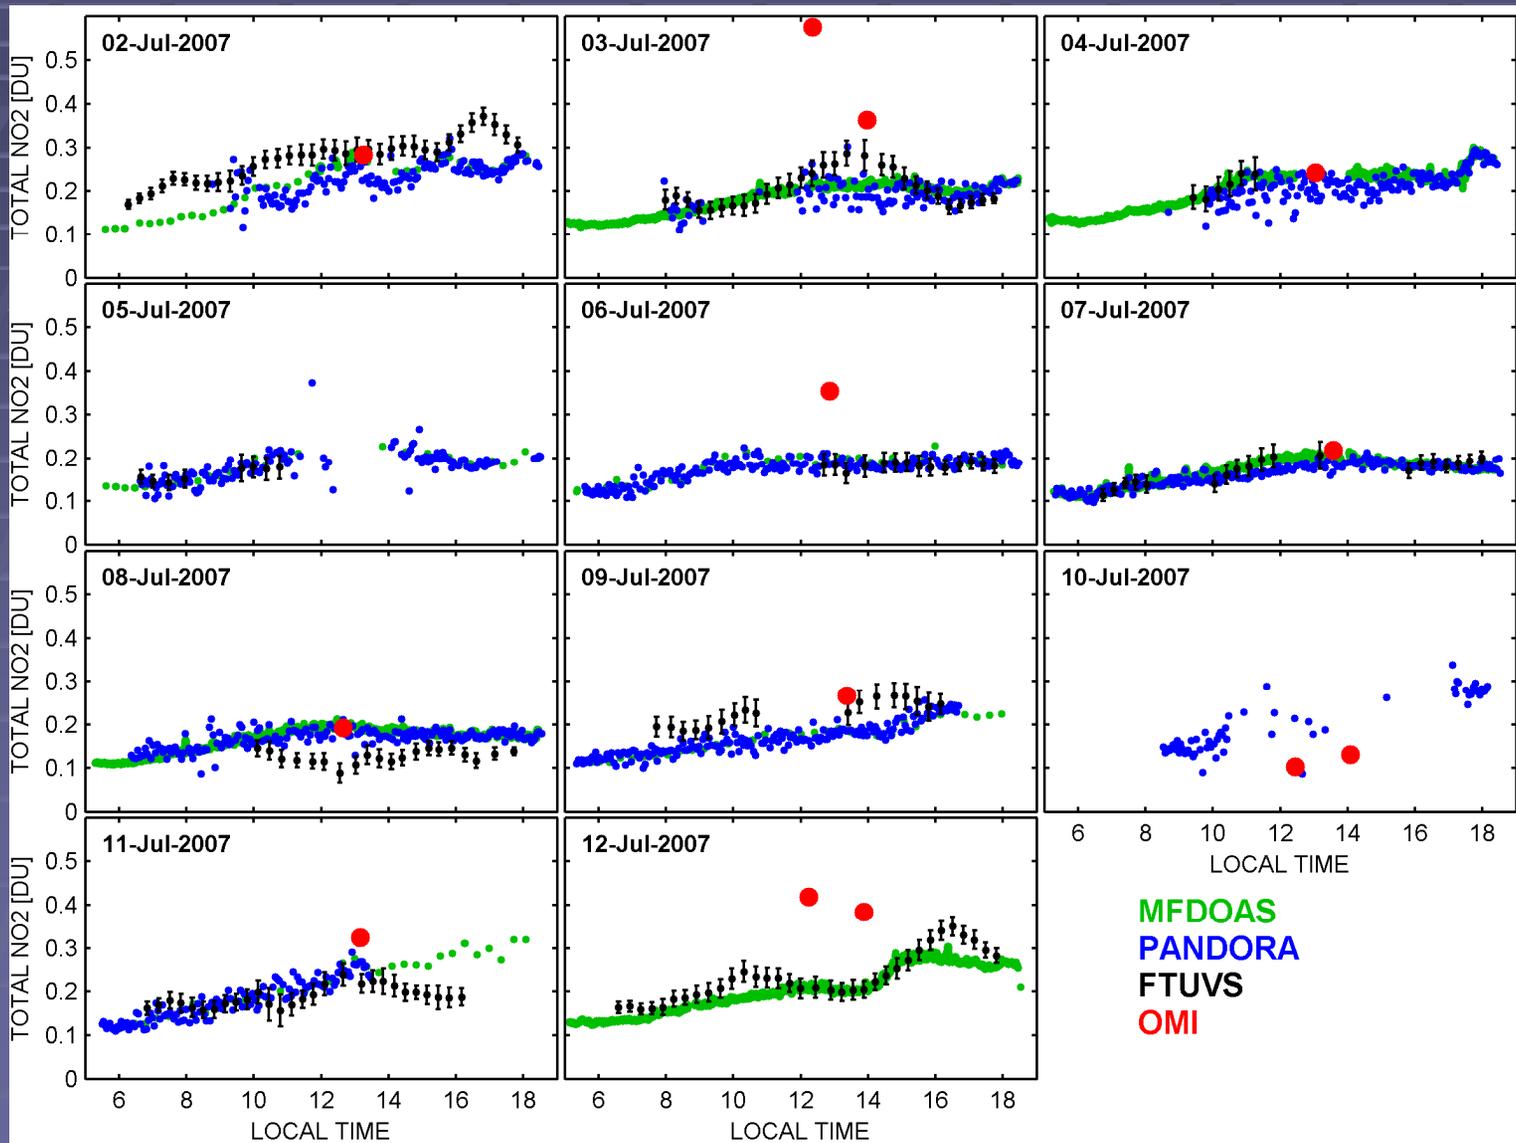

- Time registration
  - Particular problem for comparison with other space borne instruments.

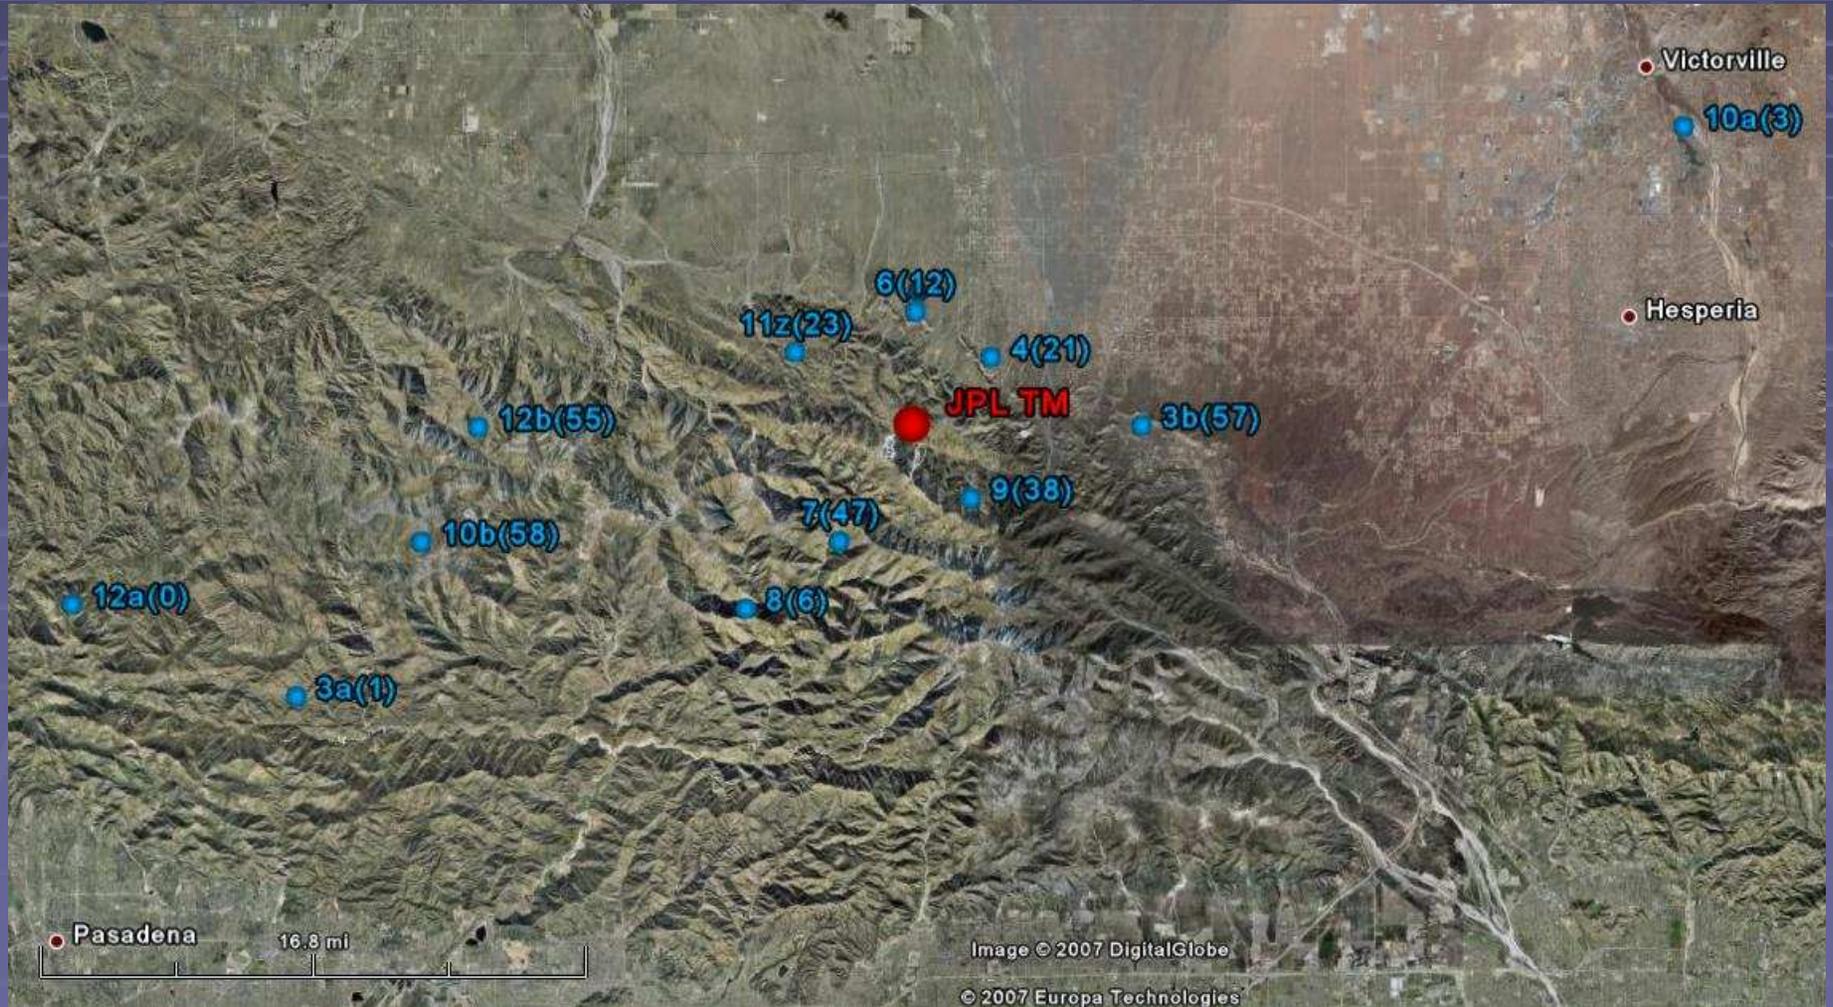

# OMI Overpass time

# Cautions about data comparisons

- Time registration
- Spatial collocation with ground-based measurements
  - Size of the effect depends on the GB measurement site and its environs.
  - Size of the effect also depends on the FoV size.

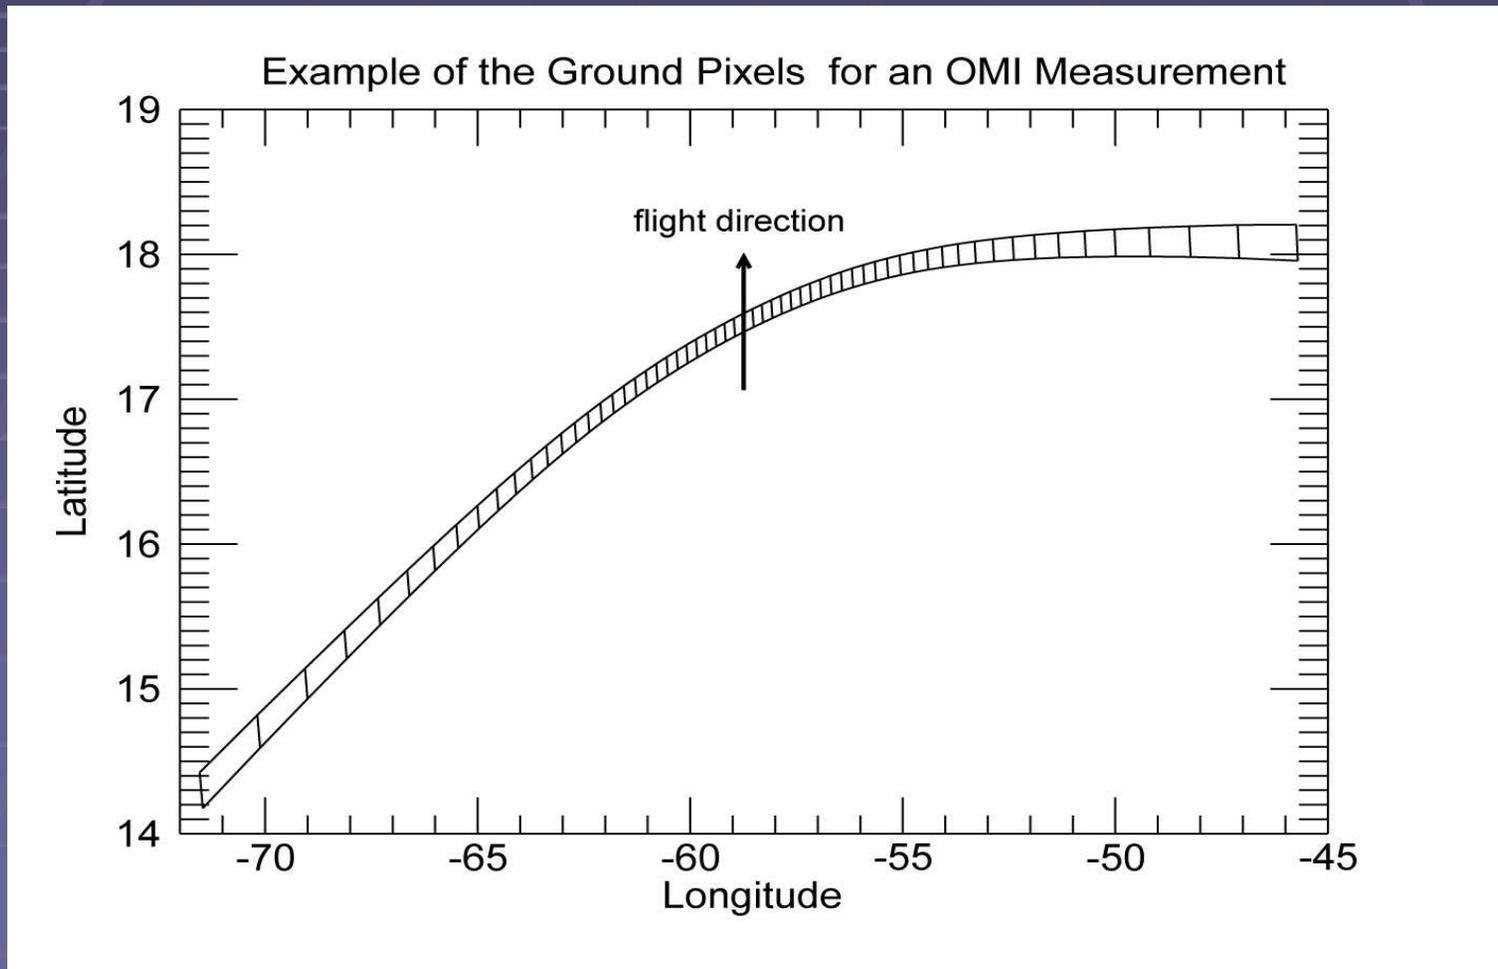

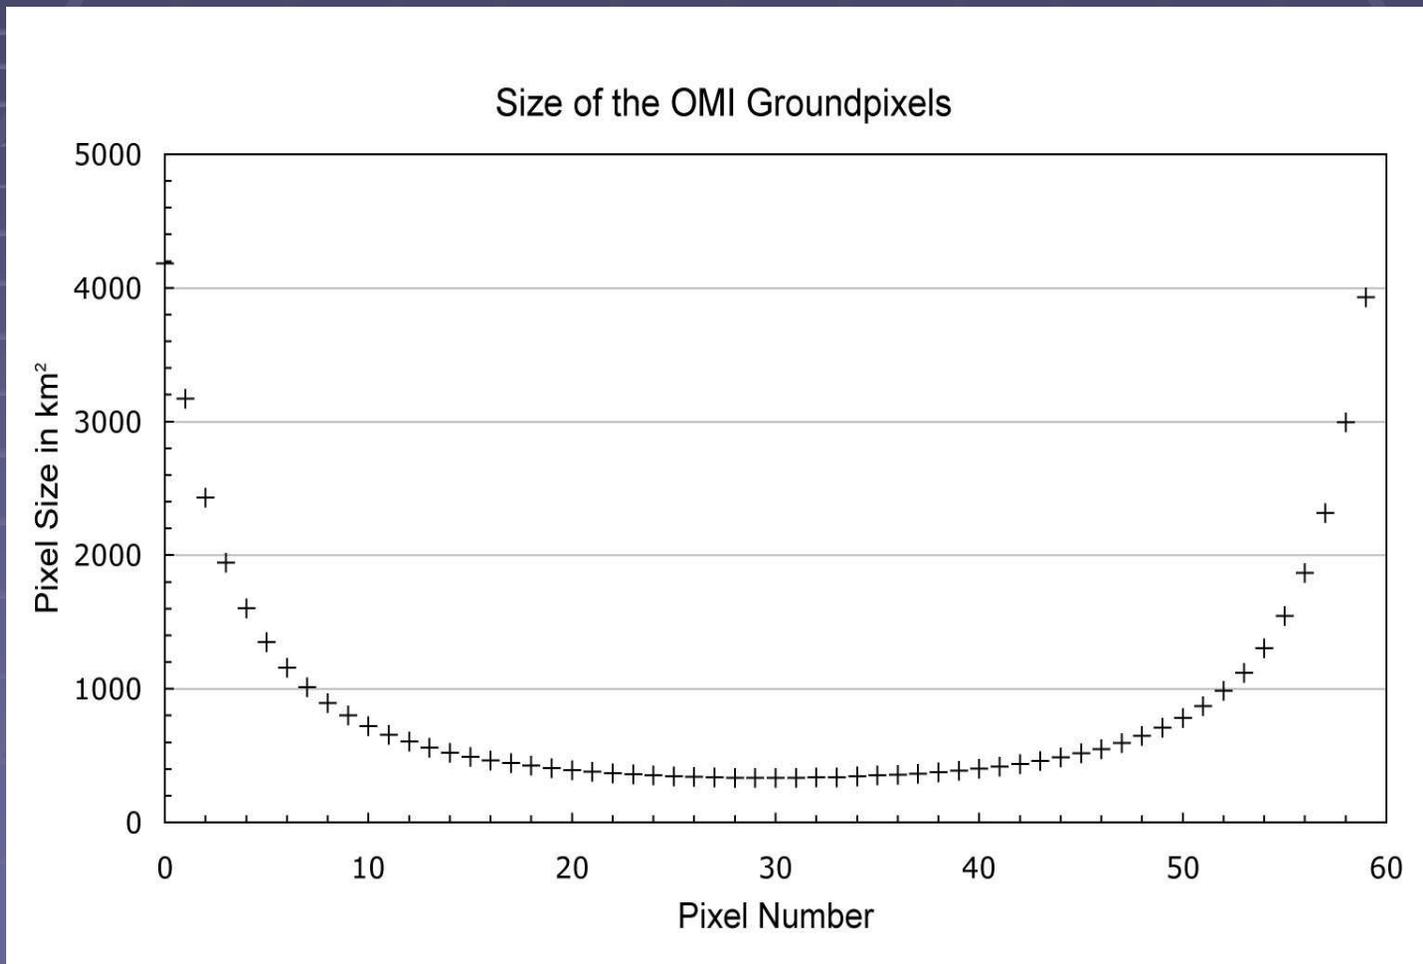

# Cautions about data comparisons

- Time registration
- Spatial collocation with ground-based measurements
- Field-of-View size effects
  - Inhomogeneity of the tropospheric field
  - Environment of ground-based instruments
  - Better correlations in rural locations than urban

# OMI Field-of-View geometry

# OMI Field-of-View geometry

# Challenges and work in progress

- Identify sources of possible error in the algorithm.
- Implement improved Level-0 to Level-1 processing.
- Improve ancillary databases (Earth surface reflectivity climatology, a priori profiles)
- Improve uncertainty estimates
- Improve NO<sub>2</sub> estimates with partially clouded scenes
- Validate NO<sub>2</sub> columns in non-clear-sky conditions
- Continue to collect feedback from user community

# Contact Information

- For data
  - GES-DISC web site
    - <http://disc.gsfc.nasa.gov/>
  - AVDC web site
    - <http://avdc.gsfc.nasa.gov/>
- For Readme File and other technical information
  - GES-DISC and AVDC
- Users of data are encouraged to contact the data product developers for up-to-the-minute technical guidance.
