

# ESIP Membership Application

Response ID: 43 Data

## 1. Contact Information

---

### 1. Primary Contact

**First Name****Name**

Nancy D Searby

**Title**

Capacity Building Program Manager

**Organization**

NASA HQ Earth Sciences Division Applied Sciences Program

**Street Address**

2003 Wellfleet Ct

**Apt/Suite/Office****City**

Falls Church

**State**

VA

**Postal Code**

22043

**Country****Email Address**

Nancy.D.Searby@nasa.gov

**Phone Number**

202-395-0395

**Fax Number**

202-358-3098

**Mobile Phone****Website**

### 2. Designated Assembly Representative (if different from primary contact)

Is the contact the same as above?

## 2. About Your Organization

---

### 4. Please give a main website address for the proposed Partnership:

<http://appliedsciences.nasa.gov/>

### 5. Describe your organization's role in the Earth science community

The Capacity Building Program builds human, scientific, technological, organizational, institutional and resource capacity of governments and non-traditional partners within the United States and the developing world to use Earth observations, models, tools, and applications to support data-driven decisions.

### 6. Please describe your organization's Earth science data/technology activities.

Science and technology capacity building activities include strengthening the ability to access Earth science data, tools, and applications and to use appropriate information technology to do so.

### 7. What are the primary sources of your funding?

US Government.

## 3. How will your organization benefit from or contribute to the Earth Science Information Partners (ESIP) Federation

---

### 8. Describe current or anticipated users of your products and services and how you think the Federation can help you better serve this population.

Current and anticipated users include local, regional, and federal US government, other national governments, international organizations, as well as private sector and civil society end-users. The Federation can help build awareness of our capacity-building activities to reach more end-users.

### 9. Describe technologies that you have developed and are willing to share with the Federation?

We develop training tools, provide trainings, develop workforce, and use Earth science data for specific regional needs domestically and internationally.

### 10. Describe how you can contribute to the efforts of one or more standing committees, working groups and/or clusters? (200 words or less)

The Capacity Building Program's training program is led by Ana Prados, who is the Decisions Cluster Chair. I can contribute to this as well as potentially the climate education working group.

### 11. Describe your own use of Earth science information and data and how you would see this use enhanced by your partnership in the Federation.

I manage a program that uses Earth science information and data every day. A partnership in the Federation would provide a better understanding of how to help others access the data, and to provide feedback.

## 12. Select membership type

ESIP-III (primarily applications and education)

## 4. Other comments?

---

Any other comments about your proposed membership and its relation to the Federation that you wish to provide.

## 5. Thank You!

---
