One lonely Thursday evening a researcher contemplates data publication from their new COVID work life arrangement

A domain repo .. - What's a repo?

A FAIR repo .. - What's FAIR?

A certified repo .. - Now I'm really lost!

Where should I put my data?

Why is this so hard?

The problem is NOT a lack of information
The problem is CONNECTION with researchers

The SOLUTION?
Targeted OUTREACH supporting EXISTING resources EARLY in the RESEARCH PROCESS

Amber Budden (DataONE/NCEAS), Daniella Lowenberg (CDL), Shelley Stall (AGU), Denise Hills (GSA), Erin McLean (Arctic Data Center), Rob Crystal Ornelas (ESS-DIVE), Kristin Vanderbilt (EDI)

How do ESIPers choose a repository?

- Google
- From a list recommended by my institution
- recommendation of colleagues
- Word of mouth, start by asking a data center that I know.
- Use my institutional repo
- I'd likely consult my peers
- Repo finder tool
- Use the main sub-domain repository that is available.
- Ask my PI and lab mates where they would like data to go
- I look for repositories that are certified by authoritative organizations
- Reach out to national archive centers
- ersonal experience
- sp cified by Federal Agency
- Recommendations from my domain
- cost > quality > popularity
- Institutional repo, journal guidelines, funder guidelines
- repositories that I have used for finding data
- Look at DataONE member repositories and find one best suited for my data.
- I use the FAIR Decision Tree - I've tried Re#Data to no avail
- check with funding source for requirements
- Use domain area expertise
- Recommended by peers
- Journal editor
- Based on what type of data they have
- Researcher on NSF-funded project, comes with pre-selected data manager
- Use institutional repos
