Using ISO Metadata Session

We described aspects of ISO 19115 and 19115-2 that are new and may be useful to the remote sensing community and tools that might facilitate creating and using the metadata. CIESEN has just installed the GeoNetwork metadata management tool. Dave Denko is the project manager for ISO 19115-2. He will announce to ESIP when the draft international standard is released for a three month comment period this fall. Comments should be sent to John Evans.
